

Pre-CDN Stand-Up

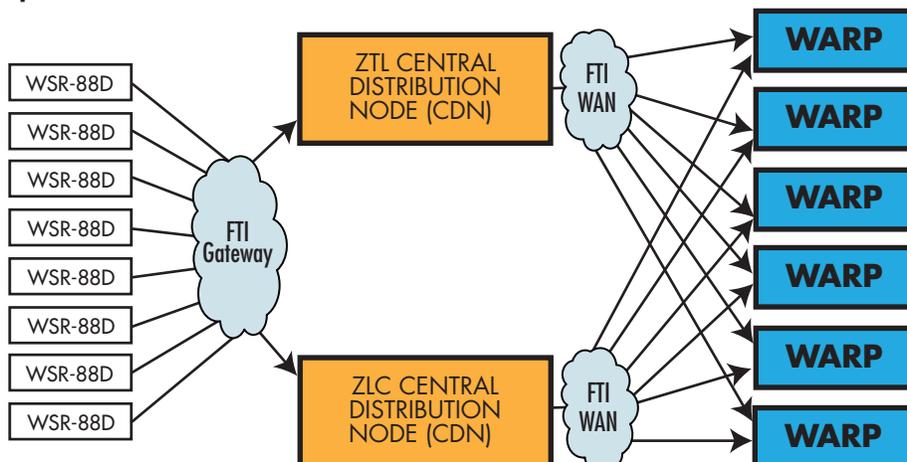

WSR-88Ds to WARP via FTI Gateway typically collocated with ARTCC.

Interim State

1. Add radar feeds from WSR-88Ds to ZTL and ZLC CDNs.
2. WARP continues to forward NEXRAD data, but CDN ability to forward the data established and tested Sept. 2013.

Completion Post-National Transition

All WSR-88Ds with the exception of Alaska and PGUA are connected through FTI Gateway to both CDNs and only the CDNs are forwarding NEXRAD data. After which the Line 21 WARP direct connections become CON PEND.
