

# **RELEASE NOTES - SPG SOFTWARE BUILD 15.1**

This page lists the enhancements and change information occurring with the Supplemental Product Generator (SPG) Software Update 15.1. There was one issue involving remnant active child windows within individual user accounts, locking the window or switching the user, and logging in as a different user. The resulting behavior was that the respective remnant child windows would become unresponsive in the new user account. This particular issue was identified and resolved within this software update.

## **Enhancements and Change Information in SPG Software Update 15.1**

SPG Software Update 15.1 provides the following enhancements and changes:

- **Software Security Updates**
- **Disabled the ability to screen lock via Windows + L**
- **Disabled the Linux OS option “Switch User”**
